

# Read Mapping

Learning objective: Become familiar with the concept of read mapping.

Level of Difficulty: 3/5

You've assembled your reads into contigs. Now it's time to determine how well each area of the contig is covered by reads.

To do: Count up the number of times each word in each position of the following contigs is represented, and plot it on the accompanying graph. Put a star next to plot points where you're not sure due to the presence of repetitive segments.
